

Treasurer's Instruction No	1227
Title	Climate Change and Environmental Impact: building and construction/roads and bridges
Effective date	1 January 2009
Objective and Background	Details the climate change environmental policies that apply to government procurement, and provides instruction on how they are to be applied.
Version Number	5
Last Reviewed Date	August 2010

Black letter (or bold) items within these Instructions are mandatory and other plain font items are instructional or for the purpose of providing guidance only

- (1) **This instruction applies only to the procurement of building and construction and roads and bridges and is to be read in conjunction with other Instructions relating to such procurements which are contained in the 1200 series of the Treasurer's Instructions.**

Further information on building and construction procurement, including a definition of "building and construction" and "roads and bridges" and information on the types of services that fall under these categories is located at www.purchasing.tas.gov.au>Buying for Government.

For information in relation to procurement of goods and non-construction related services, refer to the 1100 series of the Treasurer's Instructions.

CLIMATE CHANGE

- (2) **Agencies must ensure that climate change considerations are taken into account in the planning, design, specifications, construction, operation and ongoing maintenance of all relevant major building and construction/roads and bridges projects.**

Consideration and minimisation of climate change impacts should begin at the outset of the project. Consultants engaged by agencies should be made aware of the Government's commitment to minimise climate change impacts and the design brief should incorporate any climate change related requirements.

Climate change considerations could involve looking for opportunities to reduce energy and fuel consumption, and consideration of transport and waste disposal implications.

(3) Agencies must ensure that:

- (a) the evaluation criteria for the selection of consultants and contractors to deliver building and construction/roads and bridges major works projects must include consideration of their commitment to and capacity to deliver effective climate change outcomes; and**
- (b) climate change considerations are taken into account in the procurement of relevant building and construction/roads and bridges minor works.**

Climate change aspects of the evaluation process could include consideration of any environmental certification, the experience and qualifications of the relevant company/personnel and/or the company's own climate change policies and practices.

Major works procurements are those detailed in Instruction 1207. Minor works procurements are those detailed in Instruction 1206.

In complying with this Instruction, agencies must take into account policies issued by the Tasmanian Climate Change Office. For information and guidance in relation to climate change impacts, contact the Tasmanian Climate Change Office by email: climatechange@dpac.tas.gov.au or phone: (03) 6270 5485.

Further guides to assist agencies in implementing this policy, developed jointly by the Tasmanian Climate Change Office and the Department of Treasury and Finance, are located at www.purchasing.tas.gov.au or www.dpac.tas.gov.au/divisions/climatechange.

ENERGY CONSERVATION AND GREENHOUSE EMISSIONS

- (4) Agencies must give consideration to goods with the following attributes, so long as they represent value for money, are of appropriate quality and functionality, and there are no technical reasons for not doing so:**
- (a) energy efficient goods and mechanical services;**
 - (b) goods manufactured with energy efficient practices and processes which will contribute to minimal greenhouse gas emissions;**
 - (c) goods which will contribute to minimal greenhouse gas emissions during operation; and**
 - (d) 'green power' (energy sourced from renewable sources) where possible.**

OZONE DEPLETING SUBSTANCES

- (5) Agencies must not purchase goods known to involve the use of ozone depleting substances (as defined in the *Ozone Protection and Synthetic Greenhouse Gas Management Regulations 1995*), either as a refrigerant or in the production of insulating foams, unless no practical alternatives are available.**
- (6) Agencies must seek information from suppliers on whether the products offered involve the use of ozone depleting substances.**
- (7) As there are strict legislative controls over ozone depleting substances, when decommissioning equipment that uses, or may have used such substances, agencies must ensure that every possible action is taken to ensure that residual amounts of these substances are recovered and disposed of in accordance with the law.**

WASTE

- (8) Agencies must give consideration to goods with the following attributes, so long as they represent value for money, are of appropriate quality and functionality, and there are no technical reasons for not doing so:**
 - (a) reclaimed materials eg crushed concrete aggregate;**
 - (b) recycled/recyclable goods or goods with recycled composition or components;**
 - (c) goods which have less packaging than alternatives;**
 - (d) goods with take-back scheme at end-of-life;**
 - (e) goods which have greater longevity or are reusable; and**
 - (f) equipment which can use consumables made from recycled/recyclable materials.**

WATER EFFICIENCY AND QUALITY

- (9) Agencies must give consideration to goods with the following attributes, so long as they represent value for money, are of appropriate quality and functionality, and there are no technical reasons for not doing so:**
 - (a) water efficient goods;**
 - (b) goods manufactured with water efficient practices and processes which do not contribute to water pollutions; and**
 - (c) goods manufactured with water efficient practices and processes which do not contribute to decreased environmental flows.**
